

Nationally Valuable Moraine Formations

Document updates: English version 18.6.2013/ae

Feature Attribute Description

ArvokkaatMoreenimuodostumat

Feature attribute	Description
MuodTunnus	Moraine formation code. The total length of the code is 11 characters. Three first characters are the dataset code (MOR), next two, after the hyphen, are numbers (numbers Y01–Y13) for the old regional environmental centre (currently their tasks are taken care of by new ELY-centres), and last three characters after the hyphen, are unique numbers given according to the Regional ELY-centre. For example, a site having a code MOR-Y02-002 is located in the area of the old Regional centre of Southwest Finland (currently Southwest Finland ELY-centre).
Luokka	Dataset code
MuodTyyppi	Formation type, Classification: d = drumlin, k = hummock r = terminal moraine
ArvoLuokka	Class of the site. Classification 1-4 out of which class 1 is best. Moraine formations in classes 1-4 have national value as described in the Land extraction act. Moraine sites in classes 1-2 are classified as internationally valuable.
DigOrg	The organization responsible for the first data digitizing
MuutosPvm	Date when the dataset has been modified

Note: when the information is exported as shape files, the name of the field will have only 10 digits.
