Feature Attribute

MuodTunnus:

Description

A 10 digit ID code for a site. Three first digits indicate the dataset code (TUU), two next digits (01 -13) after hyphen indicate previously responsible local environmental centres (presently ELY-centres), last three digits are specific number series as per Local Environmental Centre. E.g. site number TUU-02-002 is under administration of Lounais-Suomen Environmental Centre (now ELY-centre of Varsinais-Suomi).

Name:

Site name

Luokka:

Dataset class (TUU= Valuable Aeolian and Littoral Deposits)

MuodTyyppi:

Formation type: Tuulikerrostuma (aeolian deposit), tuulija rantakerrostuma (combination of aeolian and littoral deposits) or rantakerrostuma (littoral deposit).

Arvoluokka:

Value class of the site. Classification is 1 to 4, out of which class 1 is best. Moraine formations in classes 1-4 have national value as described in the Land extraction act.
